## Island Pacific and Ingenico Accredited for Secure Mobile Payments

---

**Sydney, 14<sup>th</sup> October 2012** - Island Pacific, a leading global provider of software solutions and services to the retail industry, today announced that its Island Pacific retail point-of-sale (POS) solutions, operating on the Ingenico iSMP portable docking cradle, has been accredited as an authorised payment solution.

Retail business customers of Island Pacific will now be able to simply place their Apple iPhone or iPod Touch in the Ingenico iSMP cradle and use the Island Pacific Mobile software to conduct secure EFTPOS transactions from any location. The solution creates an end-to-end mobile retail solution that frees customers from the need to queue at a sales counter and enables store staff to complete a sale from anywhere on the shop floor. This revolutionary wireless solution could well see retailers replacing their traditional counter top Point of Sale and EFTPOS devices, reclaiming retail floor space for merchandise and saving costs on technology.

Equipped to handle multiple forms of payment, the Ingenico iSMP contains barcode scanner, cardswipe, Chip and PIN and near field communications (NCF) capabilities. Transaction communication is carried out using the iPhone's own 3G connection, or requires a WiFi network connection for an iPod Touch.

Clive Klugman, CEO, Island Pacific Australia said, "Customer demand for immediacy and convenience is driving retailers to seek new ways of providing service. It's already clear that sales mobility is becoming a crucial differentiator between stores. What the Ingenico iSMP and Island Pacific Mobile solution offers is a way to transition from a fixed register to full, secure, retail service using a mobile phone."

The combined Island Pacific Mobile and Ingenico iSMP solution will be piloted by a small number of customers before being made available for wider use.

The Island Pacific Mobile software speeds the time for sales transactions and offers leading retail functionality including the ability to search customer performance data, review purchase histories, conduct product enquiries and manage lay-by documentation, stocktake and customer loyalty programs and more. The solution can be deployed either stand-alone in a pop-up store environment or integrated into a store's current POS infrastructure.
